

TEAM TRUST INDICATOR

Trust – the nucleus that binds the team together

The Team Trust Indicator (TTI) explores how a team can reach higher performance levels through measuring and increasing the trust factor among its team members.

WHAT CAN TTI DO FOR YOUR TEAM?

- Help your team work together more productively and encourage collaboration
- Improve the team's working style, particularly with regards to morale, communication and problem-solving
- Increase innovation within the team and the ability to cope with change

KEY FEATURES OF TTI

Online questionnaire and Feedback Report, based on 9 culturally sensitive trust criteria.

Measures the trust gap between what team members want from each other and what they think they get. Provides the foundation for an action plan or a team charter. Levels of trust can be benchmarked against other teams.

Available in English, French, German, Italian and Brazilian Portuguese.

BUILD TRUST FOR COMPETITIVE ADVANTAGE

Trust can easily break down in any team, especially in virtual teams who work across cultural boundaries and are separated by distance and time zones. When levels of trust fall, productivity collapses and costs rise.

However, trust can be measured and managed. TTI enables the team to identify and develop the most relevant trust building behaviours.

WHAT OTHERS VALUE ABOUT TTI?

“The most valuable feature of the TTI tool is its capacity to put figures on team trust and to quantify some qualitative human perceptions. The outcomes are meaningful, easy to understand and form the thread of how the team works.”

Christophe Capitant (Director Design Assessment Department) Bureau Veritas, Paris
